

Condition and Treatment

1. Sp. G. is 2.542. Soft material.
2. (G.P.Merrill, 1922) That's a compound rock -- it isn't a simple mineral. Looks to me more like a piece of conglomerate than anything else. Siliceous conglomerate -- let it go at that.
3. (E.H.West, 1956) Calcite (chief constituent).
Film F-268 - X-ray diffraction.
